

# TRAUMA

Published in 1998 as a collaboration between the Centers for Disease Control (CDC) and Kaiser Permanente, the original Adverse Childhood Experiences (ACEs) study looked at the relationship between chronic stress in childhood and adult health outcomes. Adverse childhood experiences were found to be associated with significant increases in a number of negative social, behavioral health, and physical health outcomes.

## MEASURE OF NEED

Adverse Childhood Experiences Scale

- Developed by Felitti and colleagues (1998), the Adverse Childhood Experiences Scale (ACES) includes 17 items that measure childhood exposure to trauma such as psychological, physical, or sexual abuse, neglect, mental illness, domestic violence, divorce, and having a parent in prison.

## DEPARTMENT RESPONSIBLE FOR ASSESSMENT

Psychology Services

## EBRRs AND PAs\*

Access	Seeking Safety/Seeking Strength
Circle of Strength	Soldier On
